

ASP Power Board and Lid - SNA S-ECC

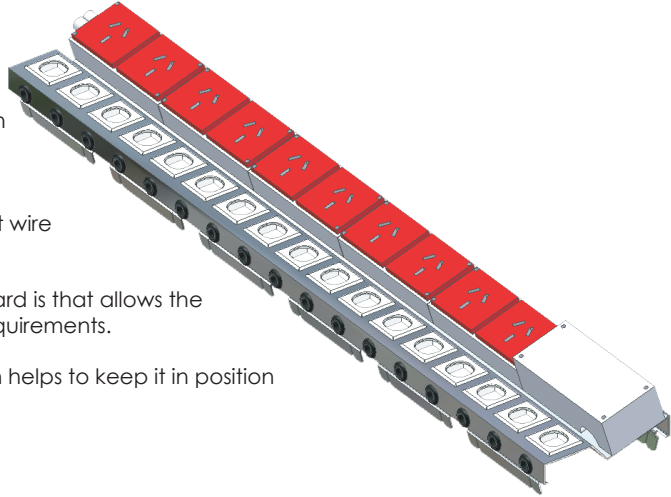

## ASP Power Board and Lid

The ASP SNA S-ECC power board system allows the occupant of the building the flexibility in choosing and designing the location of workstations and areas requiring power and data services.

This unique system is designed to be able to soft wire from a main power junction.

Another key feature of the SAN ECC power board is that allows the occupant to add on extra outlet to suit their requirements.

This system clips into our ASP cable trays - which helps to keep it in position and allows easy access.

This power board lid is constructed from 100% recycled ANS plastic and incorporates a rubber grommet to cover and protect the cables.
