

Going Carbon Neutral

Lendlease's successful attainment to develop the Barangaroo South Precinct on the iconic Sydney waterfront demonstrates their experience in sustainability initiatives including a significant commitment to reduce the embodied carbon of the building materials by 20% which was significantly greater to standard construction practices. In response to this commitment, **ASP Access Floors** objective was to measure the carbon footprint of the 300,000m² of Icon X flooring that was to be supplied and installed into the three International Towers at Barangaroo South precinct.

ASP Access Floors decided not to just measure the carbon footprint but take the action of making all product going into the Barangaroo Towers carbon neutral through **CarbonZero certification**. With this evidence of environmental responsibility, ASP was successful in attaining the contract for the 300,000m² of supply and installation access floor within the towers for the client Lendlease, and the project began in earnest.

ASP Access Floors International could not have anticipated the incredible impact that facilitating Lendlease on this project would have globally. As a result, ASP's environmental initiatives are now a core driving focus in the company's business structure. **ASP Access Floors** is striving to set the environmental benchmark internationally; objective ASP carbon 2022 standard environmentally across the globe.
