Project Exclusive

King's Own Institute's York Street Campus in Sydney is a well-established higher education facility designed to support contemporary teaching and learning. Located in the heart of the CBD, the campus provides modern learning spaces for a diverse and growing student community.

In 2025, the institute undertook an internal upgrade to improve lecture room functionality and enhance the overall student experience. An existing classroom was transformed into a tiered seating environment — delivering improved sightlines, stronger engagement, and a more structured lecture setting.

THE ACCESS FLOOR SCOOP

ASP Access Floors installed the Urban Interlock access flooring system to form a tiered seating platform within the Waratah Room Lecture Theatre at King's Own Institute's York Street Campus in Sydney.

The flooring system was configured to support the stepped lecture theatre layout and provide a stable structural base for fixed seating installation.

A total of 140 m² was installed, delivering a high load-bearing solution suited to high traffic education environments. The system provided a rigid, stable platform structure to support ongoing daily use and the concentrated loads associated with tiered seating applications.

Urban Interlock also contributed to the project's sustainability objectives, supported by an independently verified Environmental Product Declaration (EPD) and a Red List Free Declare label. These environmental credentials align with responsible material selection requirements commonly adopted within tertiary education fit-outs.

DID YOU KNOW

Interlocking Edge Performance: Urban Interlock panels are designed with an interlocking edge profile that locks adjacent panels together, creating a rigid, slab-like platform structure — ideal for tiered seating where stability and minimal movement are critical.

140 m² of Tiered Urban Interlock Access Flooring Installed

Sustainability: Urban Interlock has an EPD and a Red List Free Declare label, supporting responsible material selection targets.

Featured Products

URBAN INTERLOCK

A high-density panel system combining strength, acoustic performance, and environmental efficiency.

The Interlock design allows for smooth installation and excellent dimensional stability across varying load and finish requirements.
