THE ACCESS FLOOR SCOOP

ASP supplied a combination of ICON HD and Urban Interlock systems to meet the demanding performance requirements of casino floor environments. ICON HD was installed across 3,995 m² (43,000 sqft) to support heavy rolling loads, dynamic foot traffic and complex service integration beneath the floor.

Urban Interlock was applied across a further 1,208 m² (13,000 sqft) to support areas requiring acoustic control and seamless transitions to high-finish floor surfaces.

Together, these systems create a flexible, accessible and high-strength foundation that supports gaming equipment, back-of-house services and future reconfiguration as operational needs evolve.

Featured Products

ICON HD

High-strength access floor system engineered for heavy rolling loads and durability.

URBAN INTERLOCK

Gypsum-core access flooring providing acoustic performance and compatibility with hard finishes.

DID YOU KNOW

The system installation supports material efficiency and long-term durability, aligning with modern construction standards for commercial entertainment facilities.

3,995 m² (43,000 sqft) - ICON HD
1,208 m² (13,000 sqft) - Urban Interlock

ICON HD is engineered specifically for heavy-duty environments such as gaming floors, where long-term load performance is critical.
