

UNSW Health Translation Hub

Randwick NSW

Project Exclusive

The UNSW Health Translation Hub is a flagship development in the Randwick Health & Innovation Precinct. It represents a new benchmark for collaborative, research-driven health environments in Australia.

Architecturally, the Health Translation Hub brings together advanced research facilities, clinical collaboration spaces and flexible learning environments within a highly interconnected vertical campus. Its integrated façade systems, generous communal terraces and energy-efficient building technologies support both occupant wellbeing and the project's strong sustainability objectives.

THE ACCESS FLOOR SCOOP

ASP Access Floors played a pivotal role in the UNSW Health Translation Hub by delivering a high-performance access flooring solution tailored to the building's complex mix of research, clinical, and teaching environments. Across six levels, more than 11,000m² of the ICON X access flooring system was installed in a low-height configuration to meet strict spatial requirements while maintaining full functionality and service integration.

A key feature of ASP's contribution was the project's commitment to sustainability. Through the **Walk Carbon Neutral programme**, the entire flooring scope was fully offset, enabling a certified carbon-neutral installation that aligned with the hub's broader environmental objectives. The ICON X 3.0kN system provided the durability and load-capacity required for heavy equipment, high-traffic use, and adaptable future-proofing, while detailed service coordination ensured seamless alignment with mechanical, electrical, and data infrastructure.

ASP's early-stage collaboration, technical guidance, and controlled logistics further supported efficient delivery, reinforcing their role as a partner in both performance and sustainability for this landmark health and research development.
